

10 WAYS FDB PRIZM[™] Supports AHRMM's CQO Movement

FDB PRIZM

A source of truth for medical devices for your clinical and supply chain information systems

Build and maintain an item master list or device library

Identify and document devices and supplies at each step in the process

Enable grouping and analyzing of medical device content

What is AHRMM's CQO Movement?

The **COST**, **QUALITY**, and **OUTCOMES** (CQO) Movement refers to the intersection of, and correlation between, cost, quality, and outcomes. It empowers the healthcare supply chain to reduce costs while improving patient care for greater financial outcomes.¹

FDB Prizm Helps Reduce **COST**

1

Save time and effort to manage and maintain item master list or device library with high-quality information

2

Increase charge capture with complete billing codes of products utilized during procedures

3

Reduce waste of implants and medical supplies with accurate and complete information to provide transparency into inventory system

FDB Prizm Helps Enhance **QUALITY**

4

Identify missing data attributes for non-stock items to document and track medical devices used on patients

5

Improve patient safety by providing accurate and complete clinical and operational medical device attributes

6

Quickly identify medical device recalls in the supply chain, clinical floors, and impacted patients

7

Have clinically-friendly naming to confidently know the devices being utilized

FDB Prizm Helps Improve **OUTCOMES**

8

Conduct clinical outcomes studies to evaluate safety, cost, and effectiveness of medical devices

9

Swiftly search and review functionally-equivalent products for improved value comparisons

10

Provide insight into potential alternative devices by group categorization with granular custom categorization and cross-mapping to UNSPSC commodity codes
